Senior Database Administrator

Cequint, a fast growing 80 person independent subsidiary of a $500 million company, is the leading provider of carrier-grade mobile industry solutions to tier-1 and tier-2 carriers in the U.S. The company's flagship product has been deployed by multiple carriers on over 35 million devices, and is consistently rated as one of the top-10 applications in the industry.

Cequint is actively developing the next generation of a broad mobile technology that will revolutionize the way people communicate via mobile devices. This confidential project is a large undertaking with executive visibility that will serve tens of millions of mobile users, and promises to fundamentally transform the mobile landscape.

This is an opportunity for the right candidate looking for the intellectual challenge, ownership, and excitement of a start-up, yet the stability, discipline, rigor, and resources of an established company, to have a significant impact by leading the design and implementation of a of a world class technology. You will be joining an experienced team and a company with seasoned management, and you will be working alongside some of Seattle's best and brightest engineers.

Core Responsibilities:

You will join Cequint's small data engineering team and take primary responsibility for defining and implementing the day-to-day workings of our complex, multi-datacenter product currently under development. You will help engineer all aspects of our new product and be at the center of the action as we move it from development and into production. You will not only help create and troubleshoot our system but you will also be responsible for establishing Cequint's data administration tools, policies, and procedures.

Qualifications and Experience:

- Bachelor's degree (B.A. or B.S.) in a technical field or an equivalent combination of education and experience.

- Demonstrated experience maintaining multiple complex data sets in Oracle

- Experience with local and remote redundant system architectures and Oracle replication technologies (Streams, Materialized Views)

- Proven ability to define processes and procedures involving multi-discipline teams

- Experience administering and troubleshooting data issues in a complex production environment

- Experience with SQL Server-to-Oracle data integration (SQL Server familiarity a plus)

- Experience administering MySQL a plus

- Experience with Oracle on Unix a plus

- Natural problem solving and critical thinking ability

- Self-starting, self-governing, initiative-taking, team-playing approach

- English language skills, spoken and written

- Solid communication skills, ability to attend to detail

- Software development throughout the lifecycle

- Commercial product deployment

    Cequint provides competitive salaries, DOE, full benefits spread, 401k, discount health-club membership, and a host of other benefits.
