Software Integration Engineer

We are looking for a pure technologist. Someone who simply wants to build amazing products. Someone who just gets things done. Someone who has a voice and ideas and knows how to communicate them. What we offer: a company that demonstrably cares for its employees, a company that invests in engineering, an engineering team comprised of people who genuinely like each other and who work together as a cohesive team, and C-Level execs who listen to what engineers have to say.

This is an opportunity for the right candidate looking for the intellectual challenge, ownership, and excitement of a start-up, yet the stability, discipline, rigor, and resources of an established company, to have a significant impact by leading the design and implementation of a world class technology. You will be joining an experienced team and a company with seasoned management, and you will be working alongside some of Seattle's best and brightest engineers.

Core Responsibilities:

The primary role is for you to act as an integration engineer to evolve the product for the latest devices with the latest capabilities. You will contribute to the development/creation of our core product; work with OEMs to deploy the product; work with QA to ensure the quality of the deployment; and work with project management to keep the project moving forward. Your challenge is to maintain an extraordinary level of OEM and carrier satisfaction while ensuring that a handset deployment is not missed. This is a highly technical position with a customer-facing component that requires demonstrated coding ability as well as superior communication skills.

Qualifications and Experience:

- Bachelor's degree (B.A. or B.S.) in a technical field from or equivalent combination of education and experience.
- 2+ years of software development experience
- 2+ C/C++ development experience mandatory;
- Demonstrable experience with software testing and release processes
- Superior customer / client interfacing ability
- Natural problem solving and critical thinking ability
- Self-starting, self-governing, initiative-taking, team-playing approach
- English language skills, spoken and written
- Solid communication skills, ability to attend to detail
- Software development throughout the lifecycle
- Previous mobile industry experience a plus (Android, Brew / BrewMP, Symbian, BlackBerry, etc.)

Cequint provides competitive salaries, DOE, full benefits spread, 401k, discount health-club membership, and a host of other benefits.
